Let U_i be a set of charts of M and V_i of N where both U_i and V_i are open sets and $i=1,2$. Let $\varphi_i: U_i \rightarrow V_i$ be a bijective conformal map. By a result of Breitner and Schulze-Pillot, we have $\varphi_i^*(g_2) = e^{2f}(g_1)$ where $f \in C^\infty(U_i, \mathbb{R})$ My question is whether there is a non trivial $f \in C^\infty(U_1, \mathbb{R})$ such that $\varphi_1: U_1 \rightarrow V_1$ is conformal and $\varphi_2^*(g_2) = e^{2f}(g_1)$? A: The result you cited is that f is a harmonic function, not that it is necessarily smooth. (What is smooth, in this context, is not clear.) The author of the cited paper introduces harmonic functions in the first paragraph f3916c5595

You can import one or many blocks of feedback into a DWG or DXF file using a new import method that imports the contents of a DXF/DWG File (text with shape polygons) directly into a DWG/DXF file. These blocks can be edited with your preferred CAD application. This functionality can be activated and deactivated in the CAD software preferences. (Video: 1:15 min) Select (or open) a block of feedback or metadata and choose the File > Markup Import method (or press CTRL+I) and import the feedback into your drawing. (Video: 2:10 min.) You can now use a control to select a block of feedback or metadata to be used as a hot key. This hot key is specific for a feedback or metadata block. (See "Hot keys" for more information.)
